INSTALLATION METHOD

- 1 Hold the connector in one hand and press the snap ring in the other hand to pull down to separate the connector from the tee joint.

- 2 Loosen the four fixing screws on the connector and rotate the tightener so that there is sufficient distance between the tightener and the connector (the height of 3 threads) for screw installation.

⚠ If the pipe diameter of the faucet is too thick, the plastic guide sleeve inside can be removed.

- 3 Evenly adjust the four screws of the connector so that the two screws close to the wall first fully contact the outside of the faucet.

⚠ Screws near the wall can be screwed in a little in advance.

- 4 Press the connector against the faucet port to make its internal gasket fully contact with the faucet (please note that the gasket cannot be taken out).

⚠ Please select standard faucet. The faucet mouth must be flat. If it is uneven, please flatten it.

- 5 As shown in the figure, rotate the two screws on the opposite side of the wall to make them contact with the faucet, and then tighten them with a screwdriver.

- 6 Rotate the tightener until the tightener is tightened (water leakage will occur if it is not tightened). After rotation, the gap between the tightener and the connector is less than 3mm.

- 7 Insert the water inlet pipe into the connector, be sure to insert it to the bottom and snap the retaining ring.

ATTENTIONS BEFORE USING
